

Crash Problem 2008

Five years ago there was a single car accident on US Highway 14 between Sundance and Devil's Tower. The driver was in a Ford SUV and while passing another vehicle lost control and crashed. Two passengers died in the accident. The initial analysis of the rate of speed was disputed by the driver. The driver was inexperienced and the Ford SUV also had the Firestone tires that were causing problems at the time. In this case it was difficult to determine where the fault lies.

Evaluate the evidence from the crash scene and make your own determination as to what, if any, charges should be filed in connection with this case. Present April 16th.
